

Computer Network Types

LAN, MAN, and WAN are the three main types of computer networks, categorized by size, coverage, and purpose.

LAN Features

Small Area

Limited to a small geographical area.

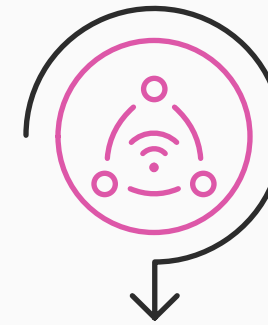

High Speed

High speed and low latency for efficient data transfer.

Privately Owned

Privately owned and managed by the organization.

Common Usage

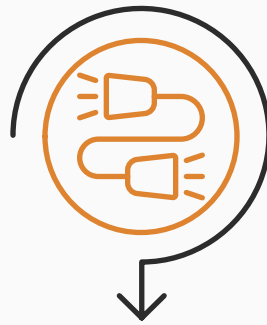

Commonly uses Ethernet or Wi-Fi for connectivity.

MAN Network Features

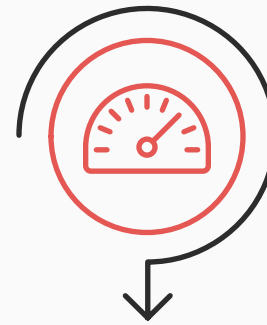

Geographical Area

Covers a larger area like a city or campus.

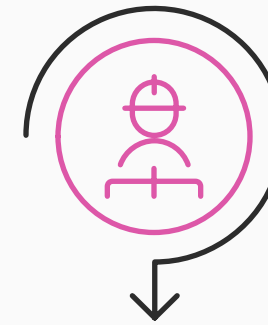

LAN Connection

Connects multiple LANs within a city.

High Speed

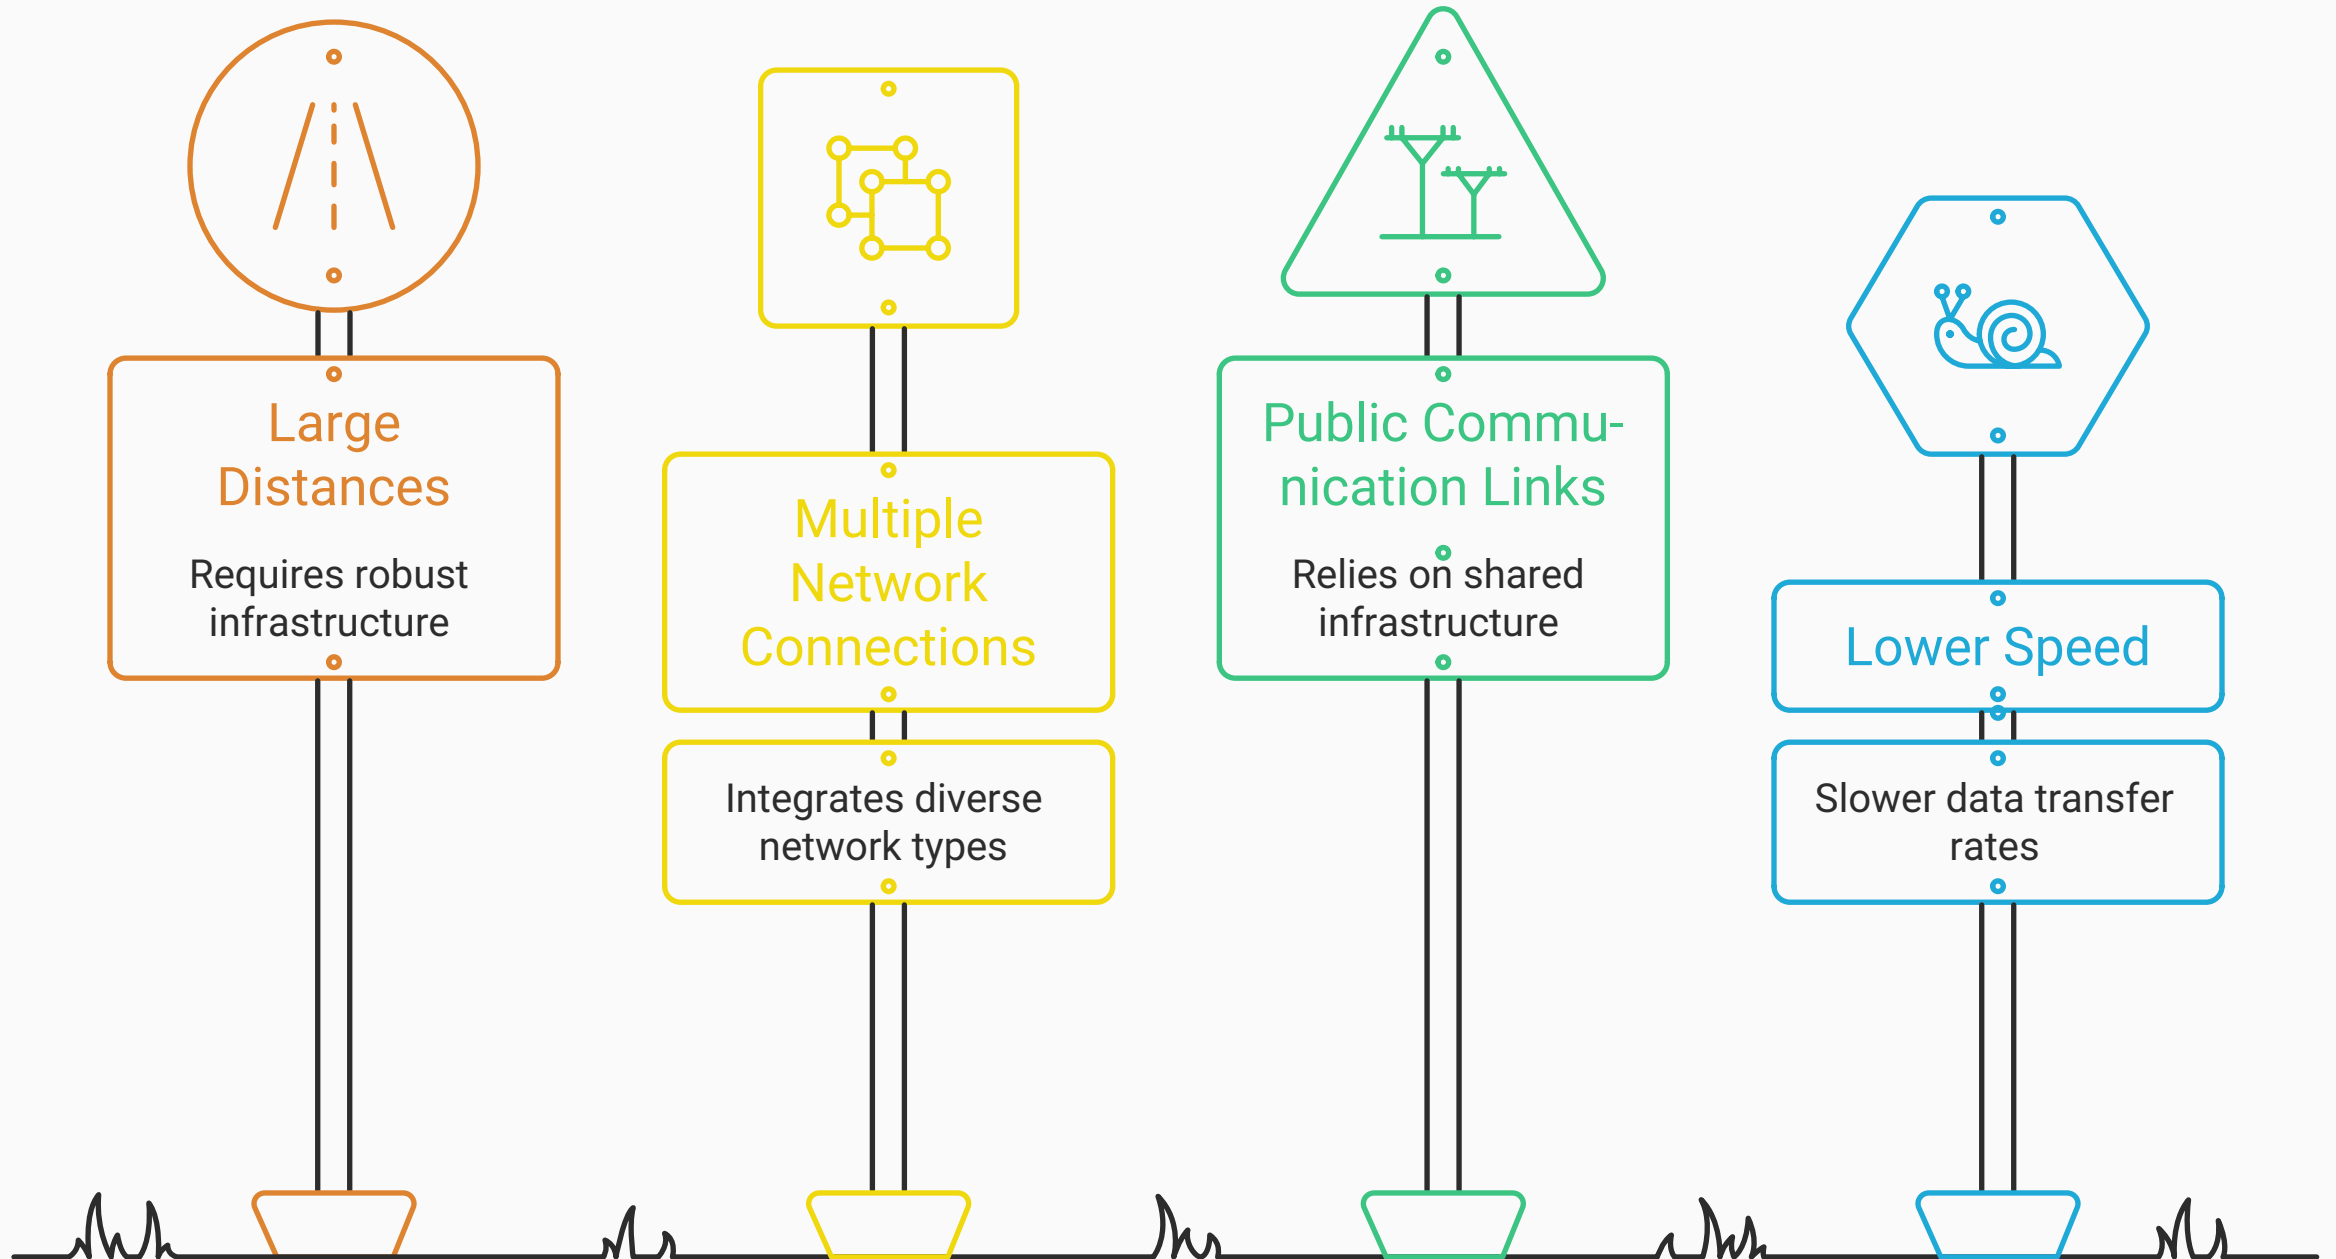

Provides high-speed connectivity between locations.

Management

Usually managed by organizations or service providers.

Navigating the Challenges of Wide Area Networks

LAN vs. MAN vs. WAN
